

➔ The Customer

Large Fast Moving Consumer Goods (FMCG) with global operations.

➔ The Problem

- In a world of just-in-time Supply Chain and control mechanisms, company executives were dependent on smart phones/mobile devices to make decisions
- Lack of access to enterprise data on smart phone and the inability to participate in Supply Chain workflows anytime or anywhere causes delays in workflow that can bear a significant cost implication and can impact the timely delivery of goods
- Our customer faced significant challenges in meeting set timelines to maintain an effective and efficient Supply Chain, as many decisions are made by executives and managers on the move
- A primary reason for this deficiency is a lack of access to enterprise data and the inability to participate in Supply Chain workflows anytime or anywhere
- As a result, our client estimated a significant burden to their procurement cost, namely to high value transactions that are part of their critical path to finished goods

➔ The Solution

- AnB team engaged the client's business users and internal IT teams to provide a strategic assessment
- AnB team assessed the company's existing business needs, processes, SAP landscape, network and infrastructure environments
- AnB team implemented its AnB mobility solution, with anytime, anywhere access to enterprise data. Thereby, providing the ability to participate in secure Supply Chain workflows for real-time decision making
- Our customer experienced a significant cost savings by eliminating bottlenecks within their workflow process.
- The solution was implemented and rolled out to the business users within four weeks without change to their current IT or business landscape
- AnB eliminated security concerns as it seamlessly replicated the as-is enterprise security policies
- Finally, the users became truly mobile by having the ability to execute key business tasks anytime, anywhere!
